Notes

Except as noted below, data are from the United States Census Bureau, American Community Survey, five-year estimates covering the period 2013-2017.

Taxable retail sales estimates are based on data from the Maine State Economist and Maine Revenue Services. Change in sales compares total taxable sales in the period October 2006-September 2007 with the period October 2017-September 2018. Sales data are collected by “economic summary areas” which do not fully align with state legislative districts; for some districts, data were combined from multiple ESAs

Earned Income Tax Credit data are from the United States Internal Revenue Service, as compiled by the Brookings Institution. Counts are for tax year 2014. See <https://www.brookings.edu/interactives/earned-income-tax-credit-eitc-interactive-and-resources/>
